## 1. Purpose

C&K components, as design and manufacturing company for micro-miniature tact switches, is constantly looking to improve the manufacturing means and processes in order to continue serving its customers with the highest performance level

As part of this continuous improvement policy, C&K Components is updating its termination options for the PTS530 series

## 2. Overview and reason for change

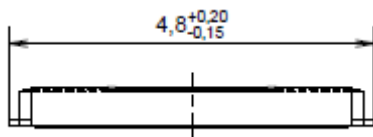

PTS 530 was originally released with J and G leads. In the course of our partnership with our customers, it happened that the J leads could not offer the same robustness to the various soldering processes as the G option, but the need for the most optimized PCB real estate was still valid

As a result the PTS30 are now available with one termination option: G with a total length of 4.65 mm instead of 4.8 mm. The PCB layout has not changed from the previous version and we also propose an alternative layout
